To who it concerns:

We wanted to send this letter of recommendation for the Shepherd Filter product offered by ABCO Fire Protection. At Casa Las Palmas, due to the high volume of cooking in our restaurant, we had a grease issue on our rooftop that was causing major concerns with the owner of the property. With our request, ABCO worked to control the grease through more frequent exhaust hood cleanings, but with our volume of cooking the issue was not solved through hood cleanings alone.

Grease being created daily after the cleanings still continue to go through the ductwork and onto the roof. Our roof is a slanted roof and the exhaust fan easily seen from the back-parking lot of the building. ABCO convinced us the solution was the Shepherd Filter product and it has worked! We were a bit skeptical at first, but now we have not only solved our rooftop grease issue and solved the concerns of the property owner, we have also reduced the frequency of our exhaust hood cleaning and are saving money along the way! The changing out of the filters by our staff is easy and ABCO has supported training us the entire way through providing us the documents to show us when to change our filters.

We are very happy with the Shepherd Filters and would recommend them to anyone with a commercial kitchen.

Sincerely,

Camilo Reyo  
Co-Owner Casa Las Palmas
